

Emory University Adds File Sharing with WebDrive®

Emory University, located in Atlanta, GA, has more than 11,000 students and more than 2,500 faculty members. Each year their goal is to provide each student with the tools necessary to “transform the world.” Emory wanted to provide its students with a solution enabling the management of home web pages, group file sharing and storage capabilities.

Taking the advice of a current employee with past WebDrive experience, Emory decided to implement an enterprise license of WebDrive. WebDrive is a file transfer client that creates a mapped drive letter to access remote files as if they were on a local computer. WebDrive has proved successful at Emory by meeting most of the technical needs for file storage and shared space.

WebDrive is available to all students, faculty and staff. WebDrive is used to access personal and group storage space located on a WebDAV server.

“WebDrive continues to provide large institutions with a solution needed to handle everyday secure file sharing and storage needs,” claims Tracy Welsh, VP of Business Development for South River Technologies. “By integrating WebDrive, universities can deliver a powerful solution to their students, faculty and staff allowing access to network files as easily as local files.”

About Emory University

Emory College is the four-year, undergraduate division of Emory University that offers an innovative, rigorous, liberal arts curriculum. The undergraduate program combines state-of-the-art university resources and a commitment to teaching undergraduate students. The college is known for academic excellence and progressive thinking that challenges students to do something with what they learn. In addition to Emory College, the University encompasses a graduate school of arts and sciences; professional schools of medicine, theology, law, nursing, public health, and business; and Oxford College, a two-year undergraduate division on the original campus of Emory in Oxford, Ga.
